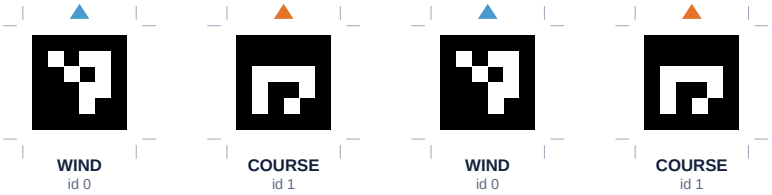
Regatta Lens · 15 mm stickers

Print at 100% / "Actual size" on matte paper or matte sticker stock. Each sticker is a 12.5 mm code with a 1.25 mm white edge.
Cut between the corner ticks and keep the white edge: the camera finds the code by its black-on-white outline.
The coloured triangle marks each sticker's TOP. Stick it down before you lose track: top = bow, upwind, or toward the finish.

50 mm. Measure this. If it is off, your printer scaled the page.

Wind dial

WIND goes on the rotating arrow (top = upwind). COURSE goes on the fixed base (top = toward the finish).



Boats

Flat on top of each meeple, top = bow. Two sets, so you have spares.

Course marks

On top of each cylinder, top = upwind. A + B = finish line (A on the left looking upwind). C + C = start line.

Reading range: a phone photo reads these from about 2 m away; Live camera mode from about 80 cm. Closer is always better.

Printing straight onto the pieces (UV printer, waterslide decal) works too. Keep a white edge of at least 1 mm around the black square.

ArUco 4x4 markers, ids 0-23 (same bits as OpenCV DICT_4X4_50).
